Two-Three Hour Lecture/Demo Seminar

Number of Students:

Since this is not a hands-on seminar, the number of students depends on the availability of seating space, a large enough screen for everyone to see, and an adequate sound system for everyone to hear.

Description:

In this lecture/seminar, Caryl will demonstrate many of the computer techniques she uses in designing her own quilts. This will include freeform designs as well as square blocks. She will show you how to scan your original pencil drawings into the

computer so they can be manipulated and colored, and how to create your own original fabric using your ink jet printer. We will start with the simple, basic stuff, and build on that. This seminar is designed to give you an overview of the possibilities, and is not designed to teach a particular program.

Caryl works in Corel Draw, so that is the drawing program she will be talking about the most. The same functions can be done in many other programs, however she is not familiar with all the programs that are on the market. To see the process for some of the quilts Caryl has designed with the assistance of her computer look at the following pages:
